

SYSTEM-EMBEDDED INTELLIGENCE IN ARCHITECTURE

H. Bier: Founded on the imperative to understand, evaluate and consciously decide about the use of digital media in architecture this research not only aims to analyze and critically assess computer-based systems in architecture, but also proposes evaluation and classification of digitally-driven architecture through procedural- and object-oriented studies. It, furthermore, introduces methodologies of digital design, which incorporate Intelligent Computer-Based Systems proposing development of prototypical tools to support the design process.
