P. Morel, H. Bier

# Disruptive Technologies: The Convergence of New Paradigms in Architecture

- Presents hypotheses and arguments about the influence of technologies on architecture and urban design
- Includes some of the most acclaimed voices in architectural theory, education, and practice
- Brings essential references to students, scholars and practitioners, interested in built environment

Through a series of highly speculative contributions by both leading and highly acclaimed practitioners and theorists, this book gives a new comprehensive overview of architectures' most recent practical and theoretical developments. While a few chapters are mostly dedicated to a historical analysis of how we got to experience a new technological reality in architecture and beyond, all chapters including the most forward looking, have in common their rigorous understanding of history as a pool of radical experiments, whether one speaks of the history of architecture, or of sociology, technology, and science. *Disruptive Technologies: The Convergence of New Paradigms in Architecture* is required reading for anybody student, practitioner, and educator who wants to do serious research in architecture and all disciplines dealing with the shaping of our environment, beyond the important but restricted domain of computational architectural design. Additional multimedia content via app: download the SN More Media app for free, scan a link with play button and access to the Additional Contents directly on your smartphone or tablet.
